SIRICHANDANA BOMMA

+1-940-843-6795 | siribomma.sdev@gmail.com | LinkedIn | GitHub | Portfolio

SUMMARY

Junior AI Engineer with **3 years of experience** developing AI-powered applications, Generative AI solutions, and cloud-based services. Skilled in Python, SQL, LLMs, RAG, prompt engineering, Azure OpenAI, and REST API development using FastAPI and Flask. Hands-on experience building data pipelines, integrating AI models, preparing datasets, and optimizing application performance. Proficient in Microsoft Azure, AWS, Docker, Git, CI/CD, and Agile development. Experienced in troubleshooting AI applications and delivering scalable AI solutions across enterprise environments.

TECHNICAL SKILLS

Programming & Data: C#, .NET Core, ASP.NET Core, Python, SQL, Java, LINQ, Entity Framework Core, Pandas, NumPy, Scikit-learn, PySpark
Machine Learning: Machine Learning, Deep Learning, Supervised & Unsupervised Learning, Feature Engineering, Model Evaluation, TensorFlow, PyTorch
Generative AI & NLP: Generative AI, LLMs, NLP, RAG, Prompt Engineering, OpenAI API, Azure OpenAI, Microsoft Copilot Studio, Semantic Kernel, Embeddings, Vector Search, Transformers, Hugging Face, LangChain
API Development & Integration: ASP.NET Core Web API, REST APIs, FastAPI, Flask, JSON, API Integration, Microservices, AI Application Development, API Testing
MLOps & Deployment: MLflow, Model Deployment, Model Monitoring, CI/CD, Docker, Kubernetes, Performance Optimization, Azure DevOps
Cloud & Data Platforms: Microsoft Azure, AWS, Azure OpenAI Service, Azure Functions, Azure AI Search, Azure Blob Storage, Databricks, Snowflake, Apache Spark
Databases & Vector Stores: SQL Server, PostgreSQL, MySQL, MongoDB, Azure SQL Database, FAISS, Pinecone
AI & Data Engineering: Data Pipelines, ETL/ELT, Data Preprocessing, Data Validation, Feature Engineering, Model Optimization, Production AI Pipelines, Semantic Search
DevOps & Tools: Git, GitHub, Jenkins, Linux, Visual Studio, VS Code, Jira, Agile/Scrum, SDLC, Unit Testing, Debugging

PROFESSIONAL EXPERIENCE

DataReveal AI, Dallas, TX **Jan 2026 – Present**
Junior AI Engineer

- Developed Python-based Generative AI applications using Azure OpenAI, LangChain, and prompt engineering, reducing manual document review time by 30% across internal workflows.
- Built RAG pipelines using Azure AI Search, FAISS, and embeddings to retrieve information from 100,000+ enterprise records with consistent response quality.
- Created REST APIs using FastAPI and Flask, connecting LLM services with Azure Functions and Blob Storage to support document processing and application integration.
- Developed SQL and PySpark data pipelines using Databricks and Snowflake, improving dataset preparation efficiency by 25% through validation and preprocessing checks.
- Supported AI application deployments using Docker, Kubernetes, Git, and Azure DevOps CI/CD, troubleshooting API failures and reducing recurring production issues by 20%.

Programmers.ai, Dallas, TX **Jul 2024 – Dec 2025**
Associate AI Engineer

- Developed Python and SQL workflows for data cleaning, feature engineering, and model evaluation using Pandas, NumPy, and Scikit-learn across client datasets.
- Integrated OpenAI APIs and Hugging Face Transformers into internal applications, supporting text classification and summarization workflows that reduced manual processing by 20%.
- Built REST API endpoints using FastAPI and Flask, connecting AI models with PostgreSQL and MongoDB for structured data access and application testing.
- Supported machine learning experiments using TensorFlow, PyTorch, and MLflow, tracking model performance and improving prediction accuracy by 12% through dataset refinement.
- Assisted with Microsoft Copilot Studio and Semantic Kernel prototypes, using Git, Jenkins, and AWS services to test AI integrations and streamline development workflows.

Zensar Technologies Limited, Hyderabad, India **Mar 2022 – Jul 2022**
Junior Software Engineer

- Developed backend modules using C#, .NET Core, and ASP.NET Core Web API, supporting internal business applications and improving response times by 15%.
- Created REST API endpoints using C#, LINQ, and Entity Framework Core, integrating SQL Server databases for reliable data retrieval and application updates.
- Wrote SQL queries, stored procedures, and database validation scripts, supporting data processing tasks and reducing recurring reporting errors across internal applications.
- Assisted with application debugging, unit testing, and API testing using Visual Studio, Postman, and Git, resolving 15+ assigned development and maintenance tickets.
- Participated in Agile development activities using Jira and Git, supporting code reviews, application fixes, and deployment preparation within a four-month assignment.

EDUCATION

Master of Science Information Science **2022-2024**
University of North Texas, USA | 3.7 GPA
Bachelor of Technology Computer Science & Engineering **2017-2021**
JNTU Hyderabad, India | 3.4 GPA

PROJECTS

AgentFabric – Autonomous Multi-Agent Research Assistant

- Developed multi-agent research assistant using Python, LangChain, and LLMs to automate research and summarize findings efficiently.

RAGChain – Contextual Document Retrieval & QA Assistant

- Developed Python-based RAG application using LangChain, embeddings, and vector search to deliver accurate contextual document answers.
- Designed document preprocessing and semantic retrieval pipelines to improve knowledge accessibility and reduce manual research efforts.

MedAgent – Healthcare Compliance & Regulation Summarizer

- Developed healthcare compliance assistant using Python, LLMs, and prompt engineering, reducing regulatory document review time significantly.
- Built Streamlit-based AI application to process healthcare regulations, generate structured summaries, and simplify compliance analysis.

Enterprise Generative AI Document Intelligence Platform

- Developed Python-based RAG applications using Azure OpenAI and LangChain, automating enterprise document analysis and retrieval.
- Integrated FastAPI, Azure AI Search, and CI/CD pipelines, improving AI application deployment and production reliability.

AI-Powered Customer Support and Text Analytics Platform

- Built Python-based NLP workflows using OpenAI APIs and Hugging Face Transformers for automated text classification.
- Developed FastAPI integrations with SQL databases and AWS, supporting model evaluation, deployment, and CI/CD workflows.
